# Florian GRIMA

Lyon • +33 7 75 72 41 84 • floriangrimadev@gmail.com • linkedin.com/in/florian-grima

**ML Engineer**

With three years of experience in technical roles, I specialize in full-stack development. My key skills include C/C++, Python, AWS cloud and TypeScript. I work in machine learning, on model optimization and development, and on integrating models into a company's workflow.

## WORK EXPERIENCE

**Eclat** **12/2025 - Present**

eclats.shop

**Full-Stack AI Engineer • Full-time** **Lyon, France**

- Designed the architecture of a B2B 3D jewelry customization workflow that interacts directly with Materialise's industrial manufacturing APIs.
- Developed pricing algorithms that take real-time precious metal prices into account, along with the €50 minimum order thresholds set by suppliers.
- Developed a web platform using React, Three.js and NestJS, integrating procedural 3D rendering pipelines with Blender (20% form conversion rate).

**TAKER** **01/2026 - 08/2026**

**AI Consultant**

- Built an internal RAG tool connected to the company's Notion.
- Set up and optimized AI tools in the company's workflow.
- Designed the architecture of an AI workflow for the communication department.

**EPITECH** **09/2025 - 08/2026**

**Teaching Assistant • Internship** **Lyon, France**

- Evaluated and graded Artificial Intelligence projects for 4 cohorts at EPITECH, using C, C++, Python, NodeJS and PyTorch over a one-year period.
- Developed a program of AI workshops that improved students' understanding of complex concepts, using modern tools such as Python and PyTorch.
- Designed and ran hands-on AI workshops that made complex concepts easier to learn and increased student engagement in their projects.

**Bulltribe** **09/2024 - 03/2025**

**Full-Stack Engineer • Freelancer** **Marseille, France**

- Migrated a backend from JavaScript to TypeScript, with a new architecture.
- Created a new mobile app design, optimized for user experience.

**Gamercraft** **07/2022 - 05/2024**

**Full-Stack Engineer** **Marseille, France**

- Shipped new features to production, such as a real-time betting system, tournaments and a performance-tracking tool for competitive video games.
- Built a dedicated AWS workflow to connect the front-end/back-end stacks with the data science stack.

## EDUCATION

**Master's-level degree in Information Technology + Software Engineering Expert title, registered at RNCP level 7**
Epitech — Marseille and Paris • 01/2021 - 01/2026

**Year abroad during the 4th year**
Université Laval — Québec City • 01/2024 - 01/2025

## CERTIFICATIONS

**Expert in Computer Science** — 09/2021 - 08/2026

## PROJECTS

### Energizer — 12/2025 - Present

Research project: https://energizer-ml.github.io/energizer
Built a machine learning library to study the usage and performance of the Apple Neural Engine on an M4 Pro chip.

### LibrOpen - FInal-year project

Designed a web application to gain visibility on personal projects.
Next.js / TypeScript / AdonisJS / PostgreSQL / Python

### P.A.R.S.E

Built an internal RAG tool connected to the company's Notion.
RAG / PyTorch / Python / TensorFlow

### R-Type - C++ Network game

Built an online game from scratch in C++.
C++

## SKILLS

**Languages:** English, French (native), Spanish

**Langages de programmation:** C, C#, C++, Javascript, Python, Rust, SQL, Typescript

**Frameworks & outils:** AdonisJS, Anthropic API, Automated Evaluation, AWS Lambda, AWS (Serverless), Communication Skills, CUDA, Databricks, Data Pipelines, Data Science, Generative AI, Git, Information Retrieval, LangChain, LlamaIndex, LLM, Natural Language Processing, Next.js, Node.js, Node.js, ONNX, pgvector, PostgreSQL, PyTorch, RAG Pipelines, React, Regression Suites, REST API, Software Engineering, TensorFlow, vLLM, Vue
