Machine Learning Engineer

Machine learning engineer (Epitech, EQF level 7) with 3+ years of software engineering experience in Python and TypeScript. Fine-tuned Stable Diffusion with LoRA on 1,000 annotated images for a production 3D-jewelry platform (10–15 s generation), and built and deployed a RAG assistant (LlamaIndex, pgvector) that cut internal search time by 25%. Author of Energizer, an open-source deep-learning library and benchmark of Apple Neural Engine training and inference (MLX, Metal, Core ML): 72 workloads measured for latency, power and energy.

EXPERIENCE

Eclat **12/2025 - Present**
Co-founder & Full-Stack AI Engineer **Lyon, France**
entrepreneurial project, live at eclats.shop

- Built a web platform (React, Three.js, NestJS) with a procedural 3D rendering pipeline in Blender, form conversion rate rose from 5% to 30% in initial testing (100 visitors).
- Fine-tuned Stable Diffusion (LoRA) on 1,000 cleaned, annotated ring images to generate visuals from natural-language customer requests interpreted by an LLM, in 10–15 seconds.
- Designed the architecture of a B2B 3D jewelry customization workflow connected to Materialise's industrial manufacturing APIs.
- Developed a pricing engine using real-time precious-metal prices and supplier minimum-order thresholds (€50).

TAKER **01/2026 - 08/2026**
AI Consultant (contract) **Lyon, France**

- Built and deployed an internal RAG assistant on the company's Notion workspace (50 pages, 15 users), cutting search time by 25%. Stack: FastAPI, Python, Next.js, LlamaIndex, pgvector, Docker.

EPITECH **09/2025 - 08/2026**
Teaching Assistant • Internship **Lyon, France**

- Graded AI projects (C, C++, Python, Node.js, PyTorch) for 4 cohorts and designed a weekly 2-hour AI workshop series for 15 students.

Bulltribe **09/2024 - 03/2025**
Full-Stack Engineer • Freelancer **Remote**

- Migrated 20,000+ lines of backend endpoints from JavaScript to TypeScript with a new architecture; production bugs down 60% (measured with Sentry).
- Redesigned the mobile app interface, validated by end-to-end tests and customer feedback.

Gamercraft **07/2022 - 05/2024**
Full-Stack Engineer **Marseille, France**

- Shipped a real-time betting system synchronized with players' live Twitch streams for 1,000 users, including payment handling and odds calculation.
- Automated tournament creation on AWS (≈10 per day), reducing setup time by 25%.

EDUCATION

Master's-level degree in IT, RNCP Level 7 / EQF 7
Epitech Marseille et Paris • 09/2021 - 08/2026

Exchange year
Université Laval — Québec City • 09/2024 - 05/2025

PROJECTS

Energizer — 12/2025 - Present

Open-source research project (MIT) https://energizer-ml.github.io/energizer - pip install energizer

Built a deep-learning library in Python (autograd, layers, optimizers; NumPy and MLX/Metal backends) and a measurement harness to characterize the Apple Neural Engine (M4 Pro): operation placement, latency, power consumption.

Measured 72 workloads and showed that the ANE is an efficient inference engine, not a training accelerator (Core ML weight refresh > 200× the cost of an MLX step), but 2.1 to 2.4× faster and 10 to 11× more energy-efficient on a frozen trunk.

LibrOpen - Final-Year Project — 09/2024 - 06/2026

Designed a web application to help developers gain visibility for their personal projects.
Next.js / TypeScript / AdonisJS / PostgreSQL / Python

R-Type - Networked Game in C++

Built an online multiplayer game from scratch in C++.
C++ / C / Asio / SFML

SKILLS

Spoken languages: English (C1), French (native), Spanish (B1)

Programming languages: C, C#, C++, Rust

IA / ML: Apple Neural Engine, Core ML, Hermes Agent, LlamaIndex, Metal, MLX, NumPy, orchestration d' agents, pgvector, PyTorch, RAG, Stable Diffusion (fine-tuning)

Backend: AdonisJS, FastAPI, NestJS, Node.js, PostgreSQL, Python, SQL

Front-end: JavaScript, Next.js, React, Three.js, TypeScript

Cloud / DevOps: AWS, Docker
